## Craft

### Papier Mâché Solar System

#### You will need:

1 balloon per planet  
Old newspaper  
Wallpaper paste  
Tap water  
Bowl  
Paints and brushes

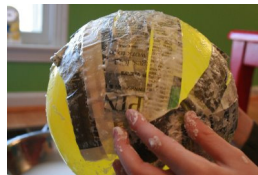

**Step 1** Inflate a balloon based on the size of the planet you are making; from biggest to smallest—Sun, Jupiter, Saturn, Uranus, Neptune, Earth, Venus, Mars, Mercury and Pluto.

**Step 2** Mix 1 cup of wallpaper paste with 3 cups of water in your bowl. This should make a smooth paste.

**Step 3** Rip up newspaper sheets into small strips. Dip the strips in the paste so they are completely covered, and stick to your balloon.

**Step 4** Cover your balloon in several layers of Papier Mâché and leave it to completely dry. This may take several days.

**Step 5** It is now time to paint your planet. Look at the picture below to see what colours your planet is.

**Step 6** Once the paint is dry, use a pin to pop the balloon inside. You can stick a piece of string from the top of your planet and hang it from the ceiling.

**FACT!** Jupiter is the biggest planet in our solar system. It is so big you could fit all the other planets inside it twice!
